## CLUE CARD

Today, you are going to be the archaeologists and historians and using the artefacts and evidence discovered in the grave, you will piece together the life of the person buried...

## CLUE CARD

Gold and garnet pins found in the grave.

## CLUE CARD

The grave is special because it is an example of a bed burial. Iron fittings were found that show it was a bed burial.

A bed burial is a type of burial in which the deceased person is buried in the ground, lying upon a wooded bed wearing fine clothing. It is a burial custom that is particularly associated with high-status women during the early Anglo-Saxon period, although excavated examples of bed burials are comparatively rare.

Beds were extremely high-status items of furniture, and the fragments of wood found of the Trumpington bed indicate it was even decorated with carving.

## CLUE CARD

Once the girl had arrived in England, the proportion of protein in her diet decreased by a small but significant amount.

The fact that her diet changed once she arrived in England suggests that her lifestyle may have changed quite significantly.

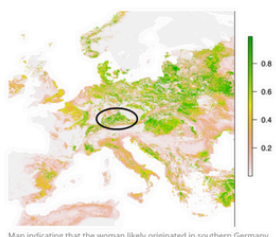

## CLUE CARD

This chain of interlinked iron rings from the grave is thought to be part of a chatelaine, a kind of belt from which early medieval women hung useful household objects like keys
